What is technology for?

Free everything for everyone, always, no restrictions whatsoever:
- Basic survival
- Adventure
- Caring for others

Technological Complete Set

- Food, coffee
- Medicine, drugs
- Shelter, heat, cooling, refrigeration
- Water purification
- Industrial materials fabrication and transport

Current Bandit System

- Whole world forced into a single technological system

- All technology controlled not by those who built or designed it but by those who are best at wielding power over other humans

- As technology gets more powerful the gap between enforced "prices" and actual value widens and banditry becomes the entire basis of the system

Current Economy

- Dig it up
- Force people to do things they hate to use it
- Set it on fire
- Bury it

Trash Feed

- All waste streams of capitalist industry
- Human waste
- Dead materials from agriculture
- Stored waste from capitalist industry

All always free!!

What is the purpose of science?

- To create a connection between the human mind and the world around us
- The easier this is the better
- The more people that can use it the better
- The clearer the link and the easier it is to understand the better
- It must all be free

Self Replication

- Truly free technology self replicates in that "you replicate it yourself"

- Anyone can teach themselves to replicate it, find the materials and do it

- Replication is something one does with intention, so replication can be stopped at any time

All Professionals Impede Progress

- The need to make a living has created an incentive to break apart systems of knowledge into ever more specialized fields

- Unification should be a goal in all human knowledge

- Therefore we must attack professional boundaries in all places to move forward

The Nature of Modern Terrorists

- Terrorism is enforcing beliefs based on violence and threats of violence

- Main source of violence today is structural: denial of basic needs in world of plenty

- All modern power structures are based on this violence, to fight terrorism we must create fundamentally new structures

The Opposite of Terrorism

- To give freely with NO restrictions based on any aspect of the recipient
- To create not a technological system but an ecosystem that incorporates technology, where needs are fulfilled naturally without any authority

Worship of Numbers is Religion

- What we need for survival and quality of life cannot be added up by numbers

- Numbers are just a tool, but to believe that a number(all money is a number and all numbers are converted to money in our society) is not supported by reality—it is religion

- We cannot fix society's "political" problems without addressing the philosophy of math

Geometry of Value

- To attack the religion of numbers we need a value system without them

- Geometry is much more natural for all humans to understand, it's built into our brains, and can be used as a basis for numbers(rather than the other way around)

- A language based on shape rather than numbers or words can be used to tell stories and describe things, making a whole value system without numbers

Trash Magic!

- The world is magical, in that it inspires wonder and that is ok

- Technology can and should inspire that wonder

- Trash is the source of future wealth, as past industry has dug up enough priceless(literally) minerals to last forever for all of humanity
